4-29-21
HPX – PMC meeting notes

Present:
Mikael, John, Gregor, Giannis, Hartmut, Nikunj

Nikunj will create a benchmark
Kokkos talk is ready, sent to SNL

GSoC
2 min, 3 max students requested

HPX – 1.7 release
- 1.6 vc integration didn't work
- triggered by Octo-tiger issues, so patch release isn't necessary
- 1.7 release in June
- HK will close the 1.6 ticket

Open PRs –
Mixing debug and release builds fails in windows
Giannis PRs are on hold until after his talk
PR main max element – one failing test

Discussion about HPX moving forward -
Splitting HPX into multiple repos
HK – would like for modularization to be finished, only thing remaining is parcelports
Once we have clear separations of modules, create a 2nd build system
Wants to avoid fork or split of repository but would be happy to isolate modules that CSCS needs
Keeping the collaboration is the top priority

Weile's DCA++ project is at a standstill for now because of changes and Weile's internship
